Abstract: This document presents supplementary materials for the manuscript “Multivariate Ordinal Random Effects Models Including Subject and Group Specific Response Style Effects” by Schauburger and Tutz (2020).

Key words: adjacent categories model; cumulative model; multivariate ordinal response; random effects models; response styles

1 Further Simulation Results

1.1 Adjacent Categories Model

Figure 1: Parameter estimates for covariate effects γ separately for the different simulation settings in the adjacent categories model. True values are marked with red crosses.

Figure 2: Parameter estimates for threshold parameters separately for the different simulation settings in the adjacent categories model. True values are marked with red crosses.

1.2 Cumulative Model

Figure 3: Parameter estimates for covariate effects γ separately for the different simulation settings in the cumulative model. True values are marked with red crosses.

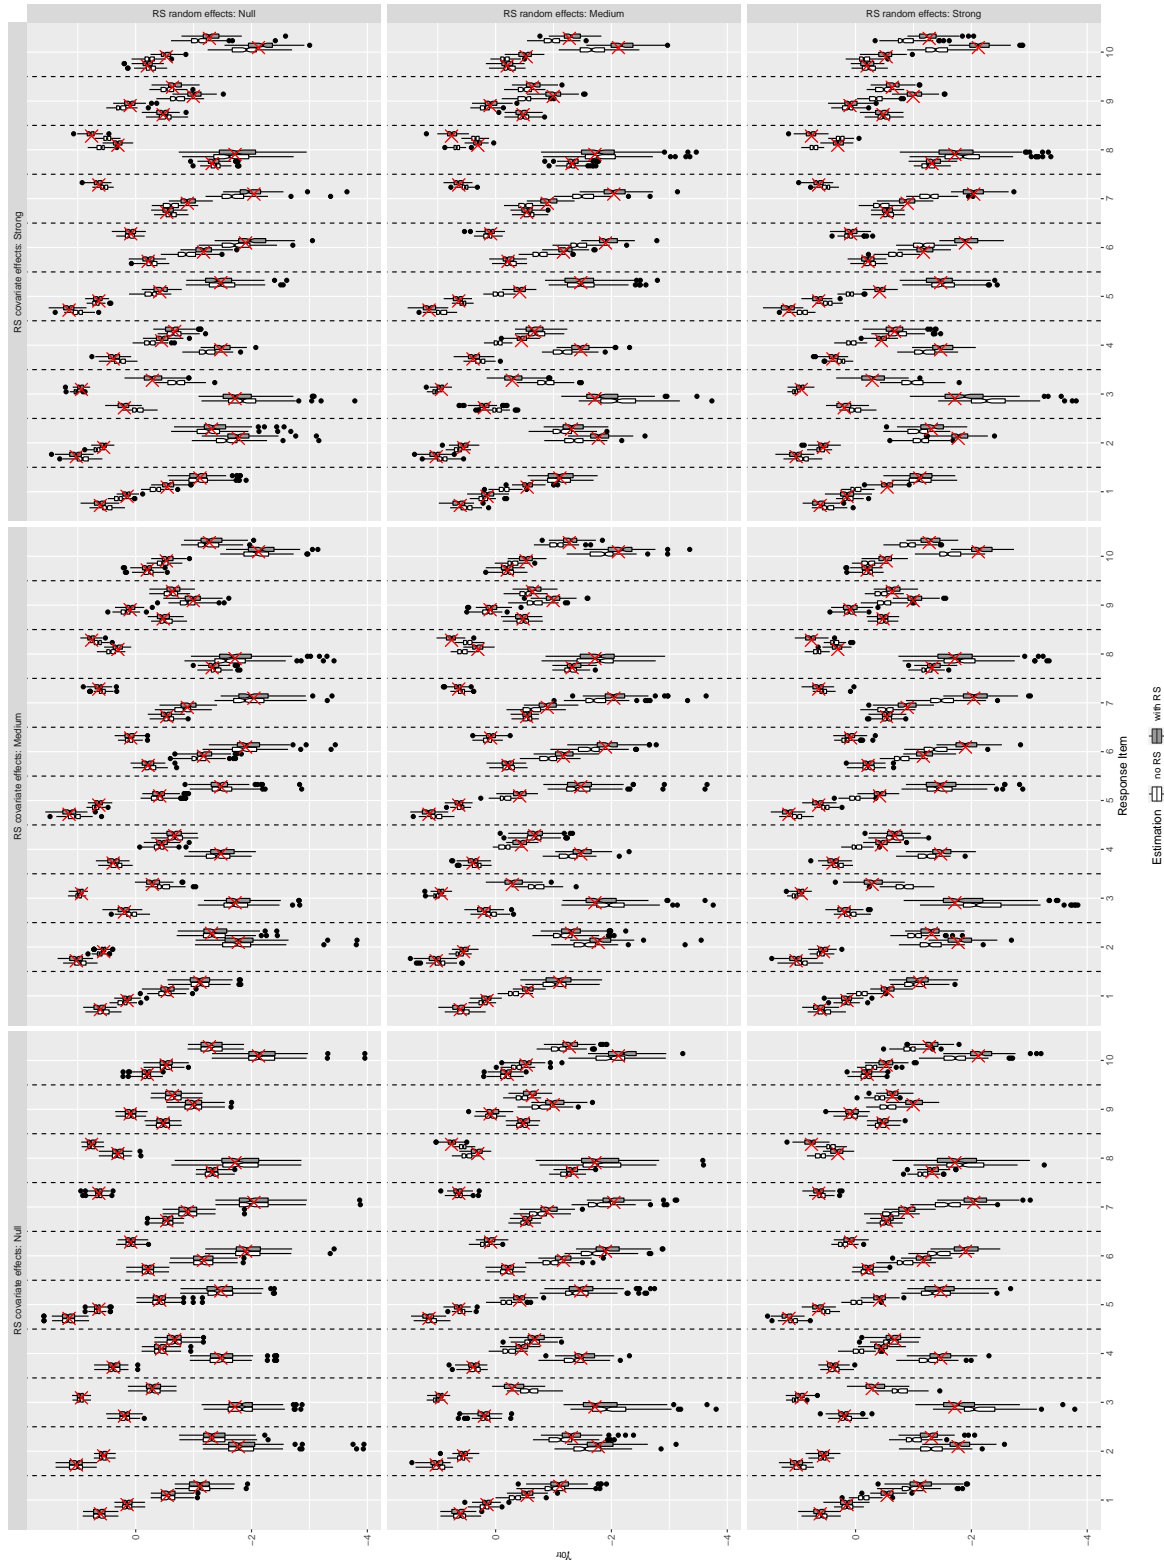

Figure 4: Parameter estimates for threshold parameters separately for the different simulation settings in the cumulative model. True values are marked with red crosses.
